

```

// BIG vs SMALL
// big = pressure / world
// small = me

// global variables (primitive data types)
// Java requires that all data be typed

float bigX = 400;
float bigY = 200;
float bigRadius = 300;

float smallRadius = 20;

// code for the beginning of execution
void setup() {
    size(800, 600);
    smooth();
}

// code to run in a loop forever
void draw() {
    background(240); // clears screen every frame

    // BIG thing (slow + heavy)
    fill(0, 50); // transparent black
    ellipse(bigX, bigY, bigRadius, bigRadius); // big circle

    // SMALL thing follows mouse
    fill(0);
    circle(mouseX, mouseY, smallRadius); // small circle

    // interaction
    // click = small fights back
    if (mousePressed) {
        smallRadius = 60; // small becomes big
    } else {
        smallRadius = 20; // small stays small
    }
}

```
